Science Agora

Things to Wonder, Things to Ponder,
And Our Future That We See Together.
Enjoy, Discuss, and Share on the Days
What Science Brings to Your Ways.

18-20 November, 2011 Tokyo, Japan

Organized by Japan Science and Technology Agency (JST)

Science Agora is a virtual, open place of assembly where science serves as a catalyst.

At the event, awaiting you will be what science brings to you -- thrill, wonder, and our future -- that you enjoy, discuss, and share with your neighbors.

Enjoy, discuss, and share what science brings to you

Get entertained in hands-on activities and science shows. Consider and share your thoughts in workshops and symposia. You will be inspired by a variety of programs waiting for you.

Meet up with science communicators

Anyone could become exhibitors and event organizers. Like a salad bowl, every one of them contributes to the evolving network of science communicators with their own skills and materials. Having something in mind? That is all you need... why not joining?

Why Science Agora?

Science has become inseparable from our daily lives. To win a better tomorrow, everyone should take one more step forward: willing to be more informed of, and think together about, what science brings to us and the relationship between science and ourselves. Held annually since 2006, Science Agora aims to provide an open "place of assembly" where science catalyzes interaction and stimulates discussion among those with diverse backgrounds.
